Bearing Adjustment

9K & 10K General Duty, 10K-15K Heavy Duty Axles:

Correct adjustment for all bearings is .001 to .010 end play.

1. Rotate hub assembly slowly while tightening the inner lock nut to 100 lb-ft. to seat the bearings.
2. Loosen the inner lock nut to remove pre-load torque. **Do not rotate the hub.**
3. Finger tighten the inner lock nut and snug.
4. Back inner lock nut out ¼ to ⅜ turn.
5. Install tang washer and outer lock nut. Bend two tangs over inner lock nut. Torque outer lock nut to 100-150 lb-ft., insuring that the inner lock nut does not turn. Bend 2 tangs over flats on outer lock nut to secure.
